Professional Profile

Software engineer with experience in leading, developing, implementing, and deploying IT systems. Skilled in server infrastructure management and security, as well as optimizing development environments. Dedicated to delivering efficient and user-friendly technology solutions that add value to organizations.

Work Experience

Software Engineer

Ministry of the Presidency of Costa Rica - San José, Costa Rica   12/2022 - present

- Led the development, implementation, and deployment of IT systems written in a variety of programming languages (C#, React, Golang, Python) for administrative and operational departments, enhancing efficiency and automating repetitive tasks.
- Managed the network infrastructure, servers, and application environments (Fortinet, VMware, Windows, Linux), ensuring high availability and optimal performance.
- Oversaw the backup and maintenance of databases (Microsoft SQL Server, MongoDB), securing data integrity in institutional systems.
- Collaborated with different teams to identify improvement opportunities and develop tailored solutions, fostering organizational innovation.
- Trained users and staff in effectively using new tools and systems, boosting technology adoption and user satisfaction.
